

NOXON audio

The ultimate audio freedom

With NOXON Audio, you can enjoy the complete music archive on your PC and thousands of Internet radio stations—virtually anywhere in your home over a Wireless LAN connection. Feel like listening to music on your hard drive from the comfort of your living room sofa? Or web radio in the kitchen? Wherever you want to listen to the audio program of your choice, NOXON Audio gives you the freedom to do so:

Without annoying cables or being restricted to a given room, and with great convenience and portability thanks to its remote control and compact size. NOXON Audio integrates easily into your existing Wireless LAN and supports both the 802.11b and 802.11g standards. With it, the complete collection of MP3 and WMA audio files on the hard drive of your PC will be available anywhere in your home.

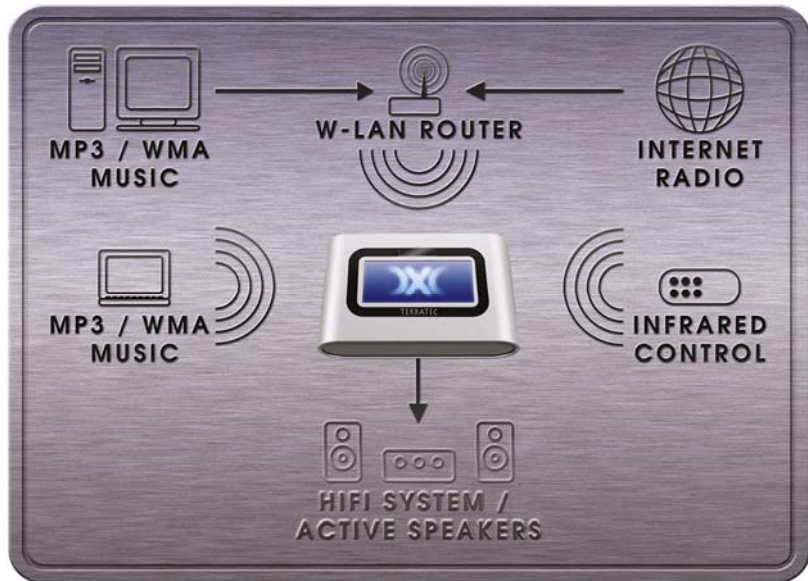

If you have DSL or a comparable Internet connection, NOXON Audio can receive thousands of Internet radio stations from all over the world—in all available languages and genres. The V-Tuner Premium Service provides you with a list of all available stations, updated daily.

The NOXON Audio wireless receiver can be connected to any audio system, letting you enjoy music and radio reception in any room, on any HiFi, home entertainment, or active speaker system. Its range is the same as a regular WLAN card, and it features a specific MAC address and the common WEP encryption method for security.

NOXON

audio
