1 2 8 V o i c e s X t e n d e d W a v e t a b l e

- 16 MB memory
- 128 voices
- More than 500 high-quality sounds
- Including 10 drum kits and 1 SFX kit
- Compatible with all wavetable ports
- GM and XG-sound compatible

Extended possibilities for your sound card: The GM and XG-sound compatible WAVE XTABLE!

The WAVE XTABLE Sound Card from TerraTec Producer lets you squeeze every drop of potential out of your sound card: 500 additional, professional-quality sounds, sorted into GM and XG-sound modes, open up entirely new realms of possibility for the musician. The card is equipped with 16MB memory, eliminating all access delays and audible latency, while keeping your computer's memory available for other tasks.

Up to 128 voices can be used simultaneously - more than enough to create full orchestral arrangements or the latest electronic and rock sounds. Speaking of sounds: 500 additional sounds leave nothing to be desired. In addition to all orchestral and other acoustic instruments, the card also features exotic electronic sounds, 10 complete drum kits and an SFX kit.

All sounds have been digitalized from the actual instruments with great accuracy and burned into the ROM of the WAVE XTABLE. One click is enough to experience the variety of sounds for yourself. Installation is as easy as child's play: just plug the WAVE XTABLE into the designated wavetable connector port, and you're done - no other installation steps are required.

Thus a few hand movements are all it takes to turn your sound card into a powerful sound generator. You don't have to worry about compatibility problems, since the WAVE XTABLE's sounds are fully compatible with the main MIDI standard GM and XG-sound, too. Give your sound card an encore with this upgrade, in the high quality you expect from TerraTec Producer - more sounds, more possibilities and more listening pleasure.
