

Feed your senses – Spoil your eyes with an amazing sharp and absolutely flicker free TV screen – or charm your ears with high quality FM stereo radio.

Scale the TV screen all the way up to fullscreen view for a silky screen experience. The nerve-racking channel search is handled by a tricky function which also names the channels directly. Decide what channels you really want to see. The intelligent multi channel preview lets you thumb through all stored channels and show them at a glance.

The highspeed teletext lets waiting time be a thing of the past. The page buffer stores all received teletext pages and holds them available for you in the background. Surf through the teletext, one click on a page number and you are there. Of course you can store a teletext page as image or text.

The extensive recording function lets you take snapshots and videoclips for further editing with the included video editing software. Use nearly every available compression technology, pre installed or from third party vendors and finish your videos with AISTs MovieXone video editing software

Please your ears with radio enjoyment. The integrated FM stereo radio and the user friendly software lets you take the most out of the air and cable network. The automatic channel search simplifies finding and managing the radio stations, the recording function and the radio timer, which presents the radio station of your choice, round off the functionality.

Compress the sound of TV or radio to space saving MP3 thanks to the multiply awarded MusicMatch Jukebox. This great piece of software also lets you archive your CD collection with support of CDDB, the internet CD data base. Further use for MP3 players like the M3Po is not out of question.

The additional video and audio inputs let you connect your satellite receiver or camcorder. Realize your own Internet TV with TeVeo's VIDio Suite.

The new WDM drivers ensure the full compatibility to the latest Windows version like Windows 2000 or Windows ME.

Technical Details

Keyfeatures – Hardware

- BT 878 video decoder chipset
- Combined TV and radio tuner
- SVideo and composite video input
- 1 * 3,5 mm mini jack for connection of soundcard or active speakers
- 1 * 3,5 mm mini jack for external audio sources (satellite receivers, VCR's etc.)

Keyfeatures – TV-Software

- Brilliant picture quality
- Automatic sender recognition and naming
- Record function for snapshots and video sequences in realtime
- Multi channel preview
- Picture scalable to full screen

Keyfeatures – Teletext-Software

- Teletext without delay through a teletext buffer
- Navigation per mouse click
- Archive function for interesting teletext contents
- Supports teletext Copy & Paste function

Keyfeatures – Radio-Software

- Automatic station scan
- Recording function
- Timer

System requirements

- Pentium II, Athlon CPU or better
- Windows 98 SE, 2000 or Windows ME
- 1 free PCI 2.1 slots
- Soundcard
- CD-ROM drive (for installation of drivers / software)
- AGP graphics card with DirectDraw drivers and video overlay support

System recommendation

- Pentium 200 MHz or better
- Windows 98 SE, 2000 or Windows ME
- 1 free PCI 2.1 slot
- Active speakers or soundcard
- CD-ROM driver (for installation of drivers / software)
- PCI or AGP graphics card with DirectDraw drivers and video overlay support
